

SIDEQUEST

Content and Experience Synopsis

Delta Challenge 2026, Track B: Crime Prevention

Crime prevention youths can
practise, not only read about.

A playable neighbourhood where a young person meets the
moment before the offence.

FUNCTIONAL PROTOTYPE AVAILABLE

sidequest-q81t.vercel.app

Scan to open

The difficult moment happens before the offence.

Many youths already know that stealing, misusing an account or following a risky dare is wrong. The difficulty is deciding safely while it is happening and friends are watching.

4,109

SHOP THEFT CASES

Down approximately 3 per cent in 2025, from 4,237 cases in 2024.

- At 19.7 per cent of total physical crime cases, shop theft remained one of the top offences committed by youths arrested in 2025.
- SPF credits its Shop Theft Awareness for Retailers programme, which had more than 1,100 outlets signed up as at 31 December 2025.

Source: Singapore Police Force, Annual Crime Brief 2025.

Retailer side prevention is working, measurably. The gap SIDEQUEST addresses is the youth side decision moment, which a retailer programme cannot reach.

SIDEQUEST STREETS · DISTRICT 01, LIVE PROTOTYPE

Crime prevention becomes somewhere you can explore.

Participants enter a fictional Singapore inspired neighbourhood rather than a directory of lessons. District 01 has shopfronts, a void deck, a kopitiam, a court and a community post, and every door that opens leads somewhere a participant can act.

The world is the interaction layer. Mission state, XP and the Safety Passport stay deterministic underneath it, in the product logic that runs without the world. Delete Streets and every point earned is still valid.

The block is alive, and nothing is gated behind walking.

RESIDENTS

Nine residents walk authored routes. They carry no quest and no signal, and they are the only figures that move between places.

INTERIORS

Four buildings open: the minimart, the kopitiam, the community post and the Crew room.

MINIMAP

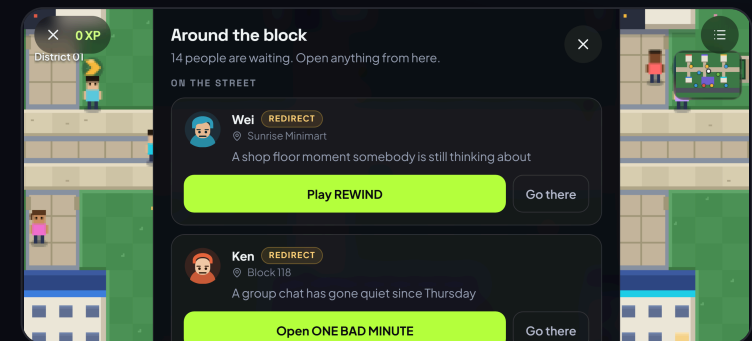

It answers what is out there and where you are, never what you should do.

BOTH ORIENTATIONS

Turning the phone widens the view rather than resizing anybody.

Portrait, one handed

The Quest List

The Quest List is a peer of the map, not a fallback. Every destination is openable without walking, because a prevention product must never gate its learning behind dexterity.

THE WORLD LOOP

Explore → Encounter → Mission → Consequence → Return to the same place

Four ways to practise prevention.

REWIND

Play the scene, reach an outcome, then return to the decision that produced it and take a different route. Both outcomes stay on screen.

Norm Mirror

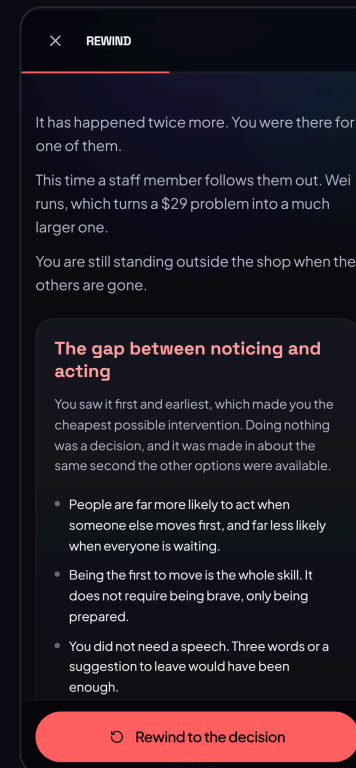

Predict what most people your age would do, then say what you would do. The gap between them is the misperception peer pressure runs on.

BREAKSAFE

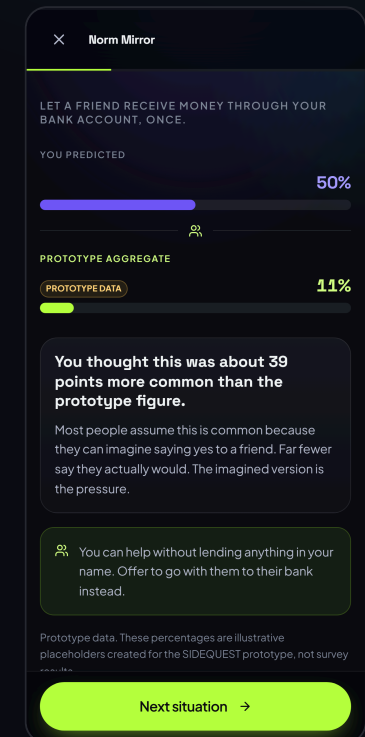

Prevention as engineering. Find what makes the honest action hard at a self checkout, then change it.

Crew Shift

Two private rounds, one either side of a group discussion. The second round is both the after distribution and the crew decision.

REWIND, at the return to the decision

Norm Mirror, predicted against prototype data

Crew Shift runs inside Chapter 4 of the ONE BAD MINUTE campaign, not as a standalone mode. Played alone it offers a Solo preview whose example answers are written down rather than simulated, labelled throughout, and counted for nothing.

None of the four has a correct answer or awards a score.

One situation can connect people, places and decisions.

The favour, step one

The favour

Devi is asked to lend her bank login to a friend, just for a week. Five steps across the void deck, the bus stop and the court: hear what she was asked, ask someone who refused first, ask an adult who knows what follows, then decide what to say. Every option carries an honest consequence and none costs XP.

PREVENTION SIGNALS

CONNECT

Somebody needs information, a trusted adult, or an official source.

PREVENT

Nothing has gone wrong yet, and there is a way to make this safer.

REDIRECT

Pressure is building. It can still be interrupted.

PROTECT

Someone may not be safe. Distance, support, and get help.

A Signal marks a situation, never a person. There is no risk field on anybody in this product.

Colour is one of four channels. The silhouette is the one that survives a red-green colour vision deficiency, and the label travels into the Quest List.

No profiling, no vigilante gameplay, no confrontation.

Do not turn youths into police. Help them become capable peers.

- Scout

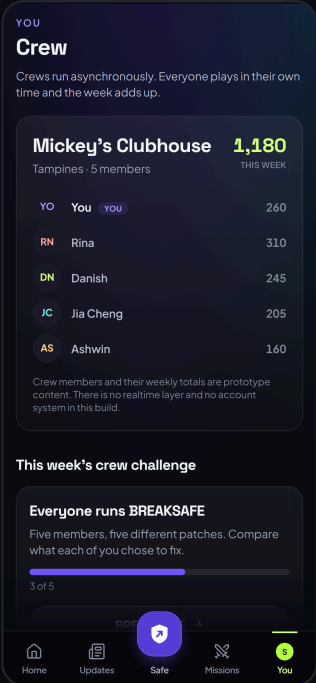

Notices a situation early, while it is still small enough to change.
- Ally

Stays with the person it is happening to, which is usually what they needed.
- Connector

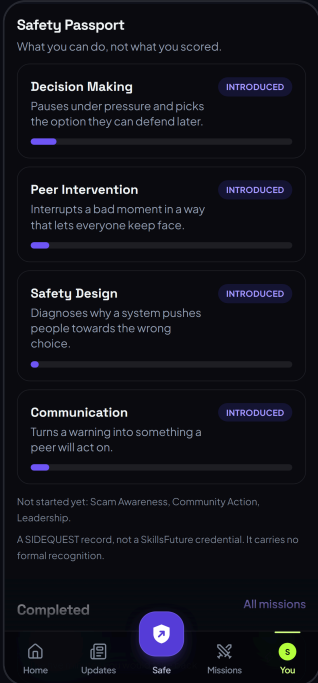

Brings in the adult, the staff member or the official channel.
- Designer

Changes the place so the situation is less likely next time.
- Creator

Makes the version of this that other young people will actually watch.

The Crew and its weekly challenge

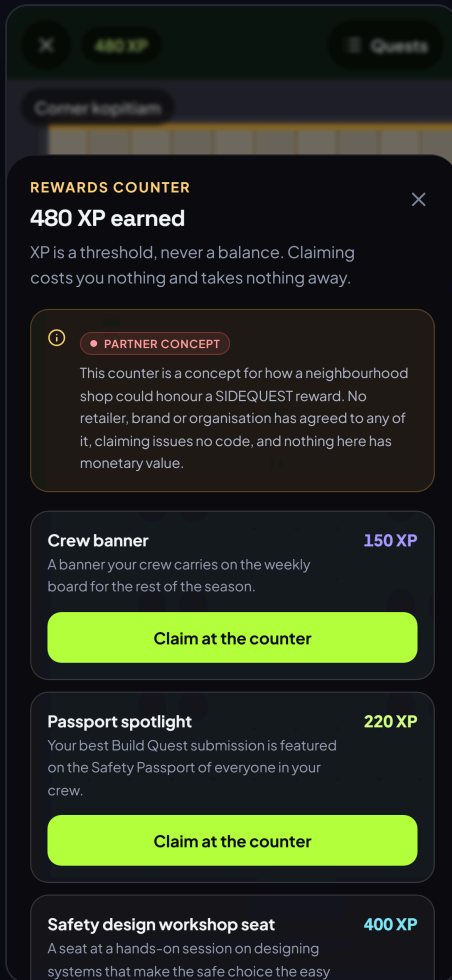

The Safety Passport

These are participation identities, not law enforcement ranks. A role is a view of a capability the profile already holds. Nothing is unlocked for it and a role cannot be lost.

The Community Safety Crew has roles and no powers. Nobody in it is police or pretending to be.

Recognition, not currency.

The rewards counter, prototype concept

XP

XP is progression and identity, not a balance. It is awarded once per mission, claiming costs nothing, and nothing is ever deducted.

REWARDS

Partner rewards are bounded participation milestones. No reward scales with incident severity.

PROPOSED CEILING

Up to S\$10 per participant across the pilot, subject to confirmed in kind sponsorship.

No merchant partnership is confirmed at submission. Any retailer shown in the prototype is illustrative, and the product states so on the screen where the claim is made.

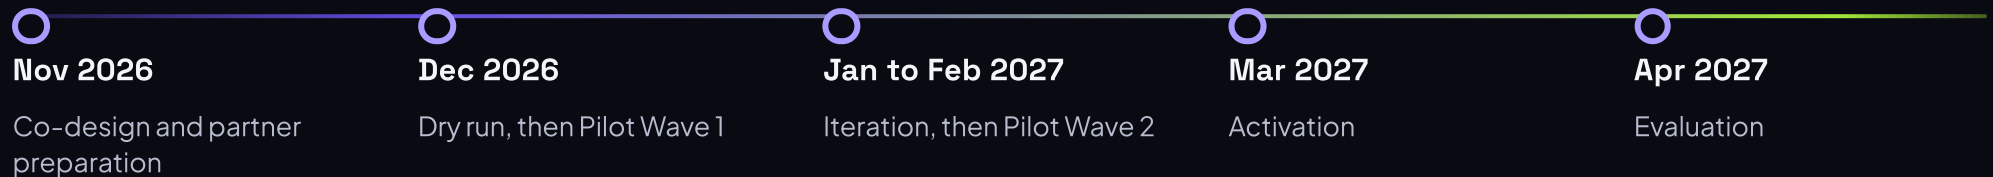

GUARDRAILS

- Safe sits outside reward logic entirely.
- No profiling, no individual risk scores, no public crime map.
- No reward for reporting, photographing or identifying anybody.
- Every prototype aggregate is labelled as prototype.

Six months, one honest starting position.

STARTING POSITION

Participants to date: zero. Data collected: none. Organisations engaged: none. Everything below starts from there.

Target: approximately 150 secondary and post-secondary youths.

Sessions run a fortnight apart rather than in one sitting, because multiple sessions is one of the three moderators the serious games literature identifies, and a single session tests the wrong thing.

The largest scheduling risk is Crew Shift, which needs real groups of three or four. If it is not run with real groups, the pilot has tested the solo product and will say so.

Measure what SIDEQUEST can reasonably influence.

MEASURE	WHAT IT ASKS	EXPECTED
Risk recognition	Names what is developing before it resolves. Facilitator scored.	Upward
Intervention confidence	Confidence in responding safely, across three scenarios.	Upward
Escalation route	Knows 999 and the emergency SMS route.	Clearest movement
Perceived peer norms	Distance between what I would do and what I think others would.	Gap narrows
Willingness to redirect	Said something to a friend about something risky.	Upward, weakly
Behavioural traces	Steps completed, replays with a different choice, return visits.	Rises across sessions

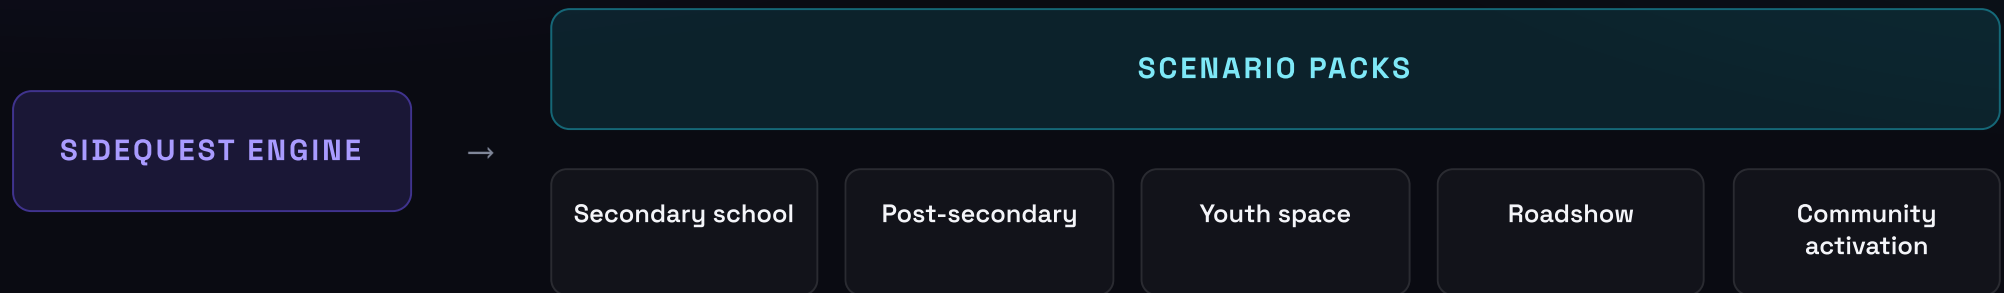

The pilot measures proximal behavioural and learning outcomes. It does not claim that a small pilot directly reduces the crime rate in Singapore. Without a comparison group the evaluation is descriptive.

Every measure is anonymous and aggregate. No names of other people are collected, ever.

“Not enough for a claim about effect.”

docs/SIX_MONTH_PILOT_PLAN.md

One engine, many rooms.

The mechanics do not change between settings. A pack is content: scenarios, threads and the age band they are written for. The architecture already carries two age bands, so proving a second pack is a month of writing rather than a rebuild.

**Crime prevention youths can practise,
not only read about.**
